

NOT FOR HUMAN OR VETERINARY USE · LABORATORY RESEARCH ONLY

## GHK-Cu Research Application Overview

GHK-Cu is a copper-binding peptide studied in laboratory environments for cellular signaling and biochemical regulation.

### 1. Compound Identification

Tripeptide complex bound with copper ions for research use.

### 2. Research Context

Studied in cellular signaling and tissue modeling environments.

### 3. Mechanism of Interest

Includes copper transport and collagen signaling pathways.

### 4. Laboratory Applications

Used in vitro assays and biochemical studies.

### 5. Regulatory Status

Not approved by FDA, EMA, or MHRA.

### 6. Compliance & Restriction

Strictly for laboratory research use only.

**Agreement:** Use confirms compliance with all research regulations.
